

# Audit Service

On site Assessment

Datasheet No. 804

Every magnetic separator that Eclipse Magnetics manufactures is supplied complete with a certificate of conformity, which includes magnetic performance. This certificate covers the equipment for magnetic performance for 12 months.

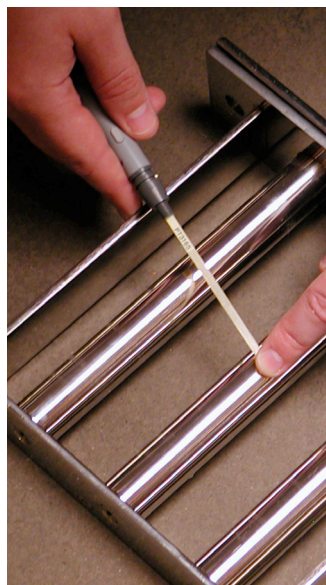

Almost all external auditors will require you to produce certification relating to magnetic equipment as it falls into the foreign body detector category.

Just like a metal detector or an X-ray machine, magnetic separators require testing and certifying. For separators this is at least every 12 months to ensure that the equipment still complies with industry standards.

Some customers request a supplier to test their equipment every 6 months or so, this will usually have been discussed during the supplier agreement stage.

We offer an on site testing and certification service so that you will never have to manufacture without your magnetic separators. This service is available 7 days a week, and is charged at a basic hourly rate which includes the re-issuing of compliance certificates.

The above service is available for any make of magnetic separator.

If you have any more questions, require technical assistance or would like a quotation, please contact us.
